

# Resource Planning

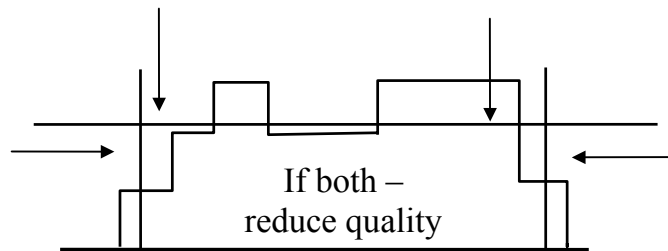

## Two main types of constraint:

Time limited - how much resource will we need?

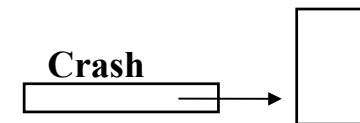

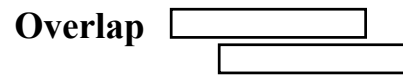

Resource limited – how long will it take?

## The process:

- Establish time and resource limits
- Establish critical path
- Draw Gantt chart
- Put in non-critical tasks with float
- Slide non-critical tasks to minimise load peaks
- Use *tricks* if necessary
- Set plan in concrete - inform others

## Tricks:

# *Resource Planning*
